The present invention relates to a power supply device for a flash light, and more particularly to an electronic flash power supply device. In the prior art, a flash light power supply device is generally mounted on a flash head so as to provide a flashing function when it is projected into an object, and a steady light function when no light is projected from the flash head. The steady light function is provided by a battery power source including as many batteries as the flash light. When using the flash light, it is necessary to turn on the steady light function; otherwise, it is very dangerous. A genetic screen identifies Scd6 as a regulator of the unfolded protein response in yeast. The unfolded protein response (UPR) is a signaling pathway that is essential for maintenance of the unfolded protein homeostasis in the endoplasmic reticulum (ER). This system consists of three sensors, Ire1p, Hac1p, and Mdj1p, and three effectors, Xbp1p, Yos1p, and Scd6p, f678ea9f9e
