Q: How can i give access of my application to other user's workspace I have applications(or packages) made by other users of eclipse. Now how can i give access of this program to the other user. A: First you need to add references to each other's projects in the other eclipse workspaces in the "References" tab of the "Properties" page of the other user's project: Next, you need to select "Properties" for each of the projects you want to access, then press the "Publish" button in the bottom right of the dialog. You may need to specify the original workspace in the dialog so you can check "Create directory for output". It is important to note that this dialog is for publishing projects, not for accessing other people's projects. When done, you should be able to open each of your projects from the other person's workspace. This can also be done within Eclipse by selecting "Window > Open Perspective > Other > Team > Open" from the menu bar, or by right-clicking on a project in one of the open workspaces.

Q: MongoDB making different joins with LIKE I have a problem with querying in mongoDB. I have 3 collections A, B, C where A is the parent collection to B and C. I need to select all C documents that has A documents that have "shared_id" and "shared_code" attributes. And the query would be something like `SELECT * FROM B C JOIN A ON B.shared_id=A.id WHERE B.shared_code LIKE 'shared_code_%'` I tried the following, but it is not working `SELECT * FROM B C JOIN A ON B.shared_id=A.id WHERE B.shared_code LIKE 'shared_code_%'` I also tried without JOIN `SELECT * FROM B WHERE B.shared_code`

What's New In?
